Forecast for Sunday 06 Sep 2020

Weather: Occasional showers during the early hours decaying later in the night. Bright or sunny spells and mainly dry through the day with only a few well scattered and light showers appearing, these chiefly across western ranges. Cloud thickening from the west during the evening to bring the risk of some patchy rain later, mainly to western ranges.

Chance of cloud free mountain/hill tops above 800m: By day 95%+ with bases infrequently lowering across summits in showers.

Visibility: Very good or excellent, falling moderate briefly in showers.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Met Office Aberdeen Meteorologist's View
Fair by day, conditions but deteriorating at height in west from evening.

Forecast for Monday 07 Sep 2020
Weather: Overcast with occasional rain through the bulk of the day, with some heavier outbreaks these generally confined to the western ranges, where hill fog will be extensive. This coupled with strong to gale summit winds will bring a risk of potentially hazardous conditions. Gradually drier conditions edging from the northwest from early evening.

Maximum wind: West to southwest initially mean 30mph with gusts reaching 40-45mph across most exposed ridges and summits, gradually easing from mid-afternoon.

Chance of cloud free mountain/hill tops above 800m: For much of the day ranging from nil in west and 30% in east with bases extensive below 500ft and extensive to broken from 600-900m respectively. Bases lifting and breaking erratically from the northwest later in the day.

Visibility: Generally moderate to poor, but in the hill fog less than a kilometre, improving later.

Temperature: **Glens:** Plus 8 Celsius rising 15 Celsius for a time during the afternoon
At 800m: Plus 7-8 Celsius rising 9-10 Celsius for a time during the afternoon
Freezing level: Above summits
